## Canadian Coast Guard Buys MaxiHALO-60 LED Flashers

Over the last several decades the Canadian Coast Guard has used Tideland Signal Corporation's TF-3B OMNIBUS II Flasher/Lampchanger, considered the finest and most reliable marine light source on the market. A key feature of the TF-3B OMNIBUS II is the proprietary two-way communication protocol, simplifying field servicing and programming. In keeping with this reliability and ease of operation, Tideland Signal has utilized this communications protocol in the successor MaxiHALO-60 LED Flasher.

The Canadian Coast Guard's Laurentian Region was one of the first areas to carry out an LED upgrade plan laid out by the AtoN 21 Group. A purchase of more than 70 MaxiHALO-60s, with the option for more in the following years, shows the Canadian Coast Guard's commitment to staying at the forefront of marine navigation. To date, every region nationwide has adopted this time proven technology for use in ML-155 and ML-300 lanterns.

When used as a direct replacement for traditional incandescent flasher/lampchangers in standard marine lanterns, the MaxiHALO-60 will breathe new life into existing solar installations by using a fraction of the power of its predecessor and still maintain the reliability and ease of operation that is so important to the CCG.
