

TIDELAND SIGNAL HEADQUARTERS PLAYS HOST TO LATIN AMERICA

Tideland Signal this month hosted a class of clients from Latin America who visited Tideland's head office in Houston, Texas to learn about new technologies for aids to navigation.

The 4 day training course included in-depth classes on optic principles – how Tideland designs lanterns and the LED technology that is used; buoy design; quality assurance and product testing.

Delegates were also given the chance to tour the Tideland facilities and talk directly to engineers and technicians about how products are designed, developed, assembled and tested. They got to see products they use being made and were able to discuss how special features that they could benefit from can be incorporated into Tideland products.

Clients were given the opportunity to see firsthand how Tideland operates. Presentations were given by Tideland team members, and class members were given the chance to learn about new technologies and how Tideland uses these in pioneering new products and developments.

Training classes that Tideland offers give both current and potential customers an insight into how high quality products are developed and how Tideland aims to meet the needs of all their customers. All the delegates that attended the sessions commented on how valuable the time they spent at Tideland was and how much knowledge they were taking away with them.

Founded in 1954, Tideland Signal Corporation is committed to meeting and exceeding the requirements for marine aids to navigation to the maritime industry.
