

GSA Contract Award

Tideland Signal Corporation is pleased to announce that they have been awarded for a US Government "General Services Administration" contract, commonly known as a GSA contract.

The pre-approved contract means that government organizations are able to purchase items directly from a GSA contract holder or from the GSA Advantage website. Because of the pre-approval process, this results in the best value to meet the government's needs.

The contract includes many aids to marine navigation items such as: polyethylene buoys, self-contained lanterns, rotating beacons as well as range lanterns. A full range of low powered, high intensity LED lanterns is also available under this contract.

In addition, V-Track, AIS and VTS systems are also listed, these includes various radar systems. Several V-Track utilities are available to network numerous AIS base stations together and provide filtered information to nominated users and organizations.

The above mentioned products are available on our GSA contract number GS-07F-6104P.
